

Scheduling

Creating a schedule shouldn't take longer than fabricating the job

Scheduler® has the right balance of powerful scheduling capabilities and ease of use. Scheduler® doesn't guess when a job will finish... it knows! Plan, cut, assemble, polish, deliver and install your jobs using employee skill sets and available resources.

Tightly aligned with your manufacturing data in ShopPAK®, Scheduler® runs lightning fast. There is no need to re-key data – all job costs, hours, material status and shifting deadlines flow automatically in to Scheduler®.

Scheduler® works by adding work orders from ShopPAK®. It calculates the available time and resource to determine when a work order can be scheduled. You see a list of scheduled work orders and their status.

Change job priorities and when you are satisfied with the trial schedule, Scheduler® automatically creates your factory's Master Production Schedule. Not only do you have a plan to work to, but you can measure progress when the job is underway.

Key Features

Skill Matrix	Assign primary, secondary and vocational back up tasks for individual employees	
Add additional time for less experienced employees		Run overtime scenarios against the schedule
Message logs	See exactly why a work order was scheduled	See exactly why it might be running late a
department affected it	Modify the schedule to meet your needs	

4 Views supports every Scheduler® implementation with thorough training for key user staff. You will be streamlining your operations and reaping the rewards in no time!
